

Hydrotherapy

Mono-station Aquatic Bike

REF. 6004.00

Mono-station aquatic bike allowing over 50 different exercises.

The ergonomic pedal bucket design offers a great surface for an important water resistance. The weight of each pedal consists of 2,5kg of stainless steel.

The bike provides a smooth ample and stroke-free pedaling.

Easy launching and handling: this station rolls effortlessly about vertical walls of the pool.

This bike may be used as a multi station equipment when adding aqua sandows, allowing several people to work on the same bike.

Bare foot use: no specific socks needed and thus no different sizes to manage.

The pedal axis rolls through vesconite rings for a smooth motion. No grease and no waterproof ball bearing (too fragile).

This station rests on 4 specific white pads made of 70 shore neoprene material. No suction discs.

The yellow-colored sleeves and anti-slip coatings provide better visibility, marking the working zone and preventing from swimming into equipment.

Technical datas:

Weight : 18 kg

Length : 110 cm

Height : 110cm

Width : 55cm

Professional equipment

Ideal water depth : range from 1.1m to 1.3m

Material : 316 L Stainless Steel

Electrolytic polishing finish

100 % Made in France

Guarantee : 2 years on stainless steel structure
